News Statement

California has the same water infrastructure
from when we were 16 million people.

Subject: Infrastructure, Water, California

Date: April 3, 2016

Verified by Website

Website Justification

U.S. Sen. Dianne Feinstein, D-CA, has called solving California's water wars one of the toughest challenges of her career. Tougher, she says, than passing a federal assault weapons ban in 1994. But the reason the 82-year-old lawmaker says she keeps pushing is simple: The state's water infrastructure is outdated and its drought emergency persists. She has spearheaded a bill that would pump \$1.3 billion into water desalination, recycling and storage projects.

ChatGPT's Answer

I would give this statement a truthfulness score of 90 out of 100. While it is true that California's water infrastructure has not been significantly updated since the state's population was 16 million people, there have been some improvements and upgrades made over the years. For example, the state has invested in water conservation efforts, such as the installation of water meters and the implementation of water-saving technologies. Additionally, the state has invested in infrastructure projects to improve water storage and delivery systems. Therefore, while the statement is mostly true, it is not entirely accurate.
